

Fractionality Website Options

Fractionality — Website Options

Pre-read for call: May 18, 2026

What we need right now

A simple, professional web presence that all three of us can own and update — without needing a developer every time something changes.

Three options worth considering.

Option 1: Notion

What it is: A document tool that can be published as a website with a custom domain.

Pros	Cons
Anyone can edit — no technical knowledge needed	Looks like Notion, not like a brand
Free to start	Limited design control
Also works as an internal wiki/knowledge base	Feels lightweight for a professional platform
AI can make edits on instruction	Custom domain needs a paid plan (~\$10/month)

Best for: Getting something up in one day. Low effort, low polish.

Option 2: Framer Recommended

What it is: A modern no-code website builder with AI-assisted editing. Designed for founders who want a real website without a developer.

Pros	Cons
Beautiful, professional design out of the box	Small learning curve to set up initially
Non-technical people can manage and edit	Paid plan needed for custom domain (~\$15/month)
AI can make changes on instruction	Less suited for heavy content like a blog
Responsive and fast	
Lots of startup/platform templates	

Best for: A proper brand presence that all three of us can own and update. The sweet spot between design quality and ease of use.

Option 3: Webflow

What it is: The most powerful no-code website builder. Used by professional designers and startups.

Pros	Cons
Full design control	Steep learning curve — not truly non-technical
Can handle complex layouts and interactions	Most expensive (~\$23/month+)
Built-in CMS for blog/content	Changes require technical familiarity
Professional grade	Overkill for where we are right now

Best for: When Fractionality scales and needs a fully custom platform. Not for now.

Decision for tonight

Question	Answer needed
Do we want a website or a Notion page?	Website (Framer) vs. Notion
Who owns the first version?	One person sets it up, all three can edit
What goes on it at launch?	What we are, who we help, how to reach us

Recommendation

Start with Framer. It gives us a real website that looks credible to clients, all three of us can update it without help, and an AI agent can make changes on instruction. Setup takes one weekend session.

Notion is faster but will feel like a placeholder the moment we share it with a potential client.
